

BIRDS BIRDS BIRDS BIRDS BIRDS BIRDS BIRDS BIRDS BIRDS BIRDS BIRDS BIRDS BIRDS

Soon you will be making a Venn diagram comparing your type of animal with birds.

You and your group wrote a huge list of questions about your type of animal and you tried to make them more powerful and interesting. Now its time to do this for birds.

In your science journal do the following:

- Write in date, time and your location.
- Stand outside somewhere you think some birds might show up. Use both your sight and your ears to check out what the birds might be doing. If you see any birds write down as much as you can about them. Write how many there are, what they are doing, what they look like and if you want, you can make a sketch.
- Next, turn to a new sheet in your science journal and write down all the questions you have about birds. Write at least 6 (more is fine).
- Last, but not least, change at least two of your questions into more "powerful questions". Look at the triangle we made earlier in the year.
